

BENDING CENTER DESIGNER

BENDING CENTER DESIGNER

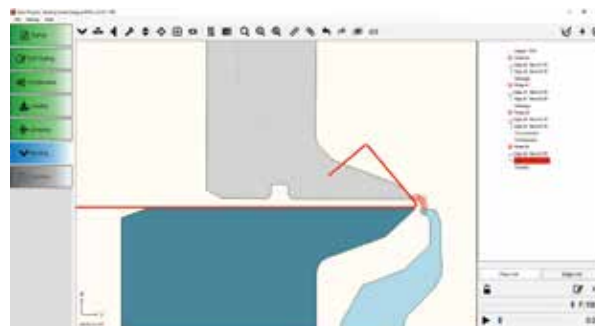

DETERMINE YOUR BENDINGS AND LEAVE THE REST TO THE CAM

The Bending Center Designer program, prepared for panel bender machines, provides 100% increase in machine efficiency and simplicity during the process.

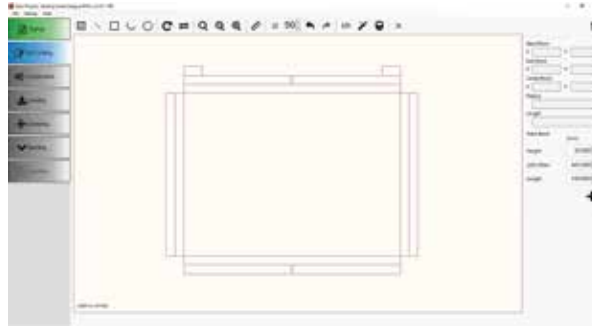

- **Automatic Unloading** : Simply enter the angles for the bending sequences, the rest of the operations are calculated by CAM and are performed optimally. Part discharging positions are calculated and managed by CAM.

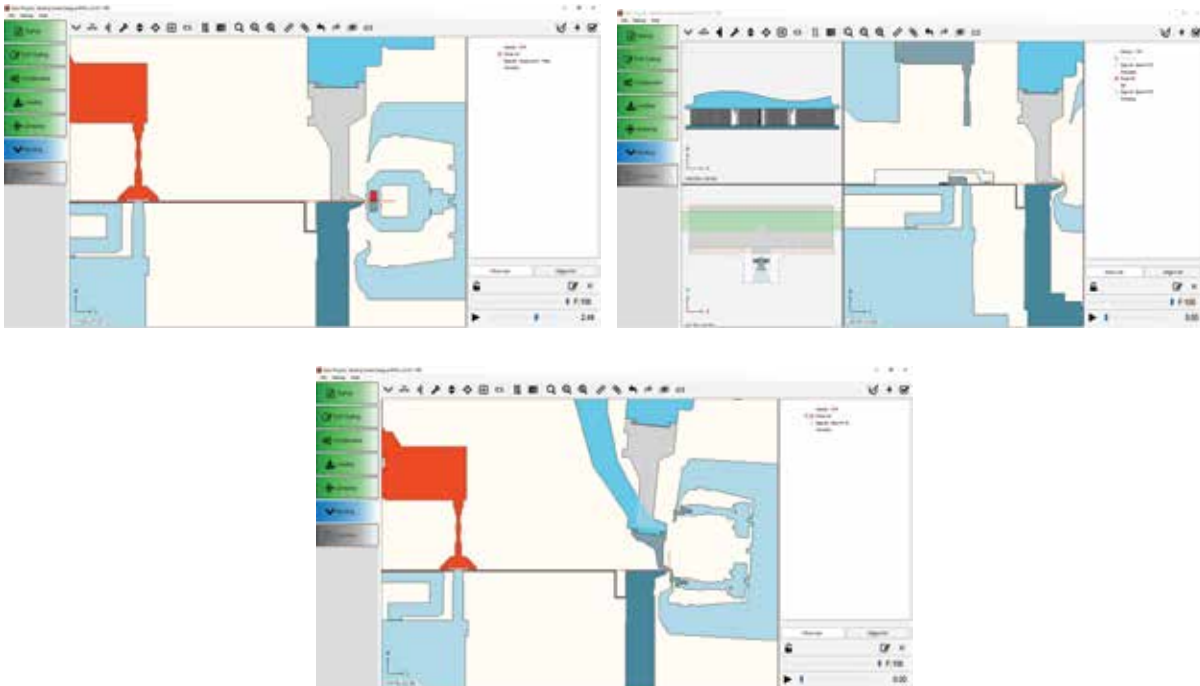

- **Collision Detection** : Collision possibilities are predicted and the user is informed.

- **Fast Bending Addition** : New bends are added to the part very quickly and easily by the user.

- **More Skilled With New Options** : Engraver, NPF, AHD options are very comfortable in CAM management.

Advantages

- Fully automatic calculation of sheet metal discharge scenarios after bending in CAM management.
- Your Panel Bender Machine is more capable with new options (Engraver, NPF, AHD).
- Axes are brought to the most productive positions and bending times are optimized.
- Bending processes are safer thanks to the crash test function.
- It is now much easier to add new bends to your expansion files.
- The visual abilities of the simulation are stronger, bending scenarios are more understandable.
